

## Which illume suits your home?

There are four sizes in the standard illume range and an additional two larger sizes in the premium range.

Choosing the right illume system for your space is an important step as different models are better suited to different locations in your home.

When choosing the right system it's a good idea to visualise the spaces in your home that aren't getting enough light or are dimly lit and then choose a model that is going to offer the most suitable output to compliment that area.

Some ideal common locations that the illume system is suited to include: Corridors, walk in robes, bathrooms, ensuites and the restroom. But the system will work just about anywhere. From kitchen pantries to your garden shed. Even the basement...

The 180mm is best suited to smaller spaces, pantries and restrooms. 270mm models work well in slightly larger areas that require more light such as bathrooms and laundries.

The larger square models offer a brighter light and contemporary square frame that suits larger areas that require the most lighting.

## Examples of ideal illume placement

See colour key on the left.

Look at the plan to the right as an example of suggested installation locations in a typical family home. Use the key to identify models.

Think you can't install a skylight?

Think again...

### The worlds first smart skylight

illume™ adds the ambience of sky lighting to buildings where under normal circumstances a traditional skylight could not be fitted.

If you are building, renovating, or designing a living space you can now include the harmonious aesthetic of sky lighting in your home without learning a trade.

illume can also easily be installed in multi-storey apartments or multi-storey housing, even in the basement.

### How does it work?

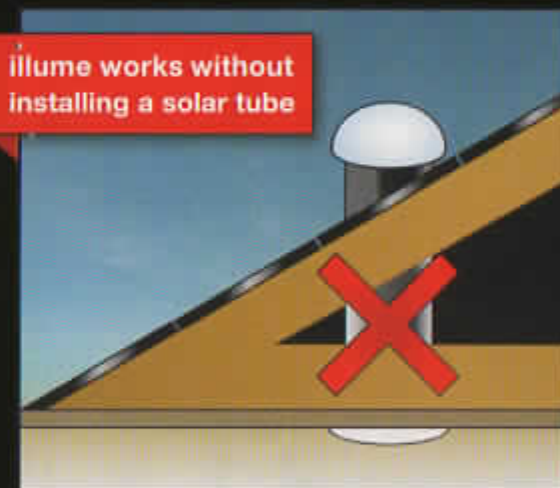

As with traditional skylights, elements such as the time of day and the presence of cloud cover also affect the lighting levels that illume emits.

We call this 'ambient light technology' and it ensures that illume behaves exactly as a traditional skylight would by creating a balanced harmony between internal and external lighting conditions.

The difference is the illume advanced skylight system isn't restricted to locations with direct roof access.

### Think you can't install a skylight?

The illume easy do-it-yourself system can be easily installed by practically anyone. You won't need tradesmen and you don't need to install a solar tube.

### What models are available?

Code	Panel Size	Cut-out Size	Lumens	Form Factor
KIS1010	180mm	165mm	450-540lm	Round
KIS1012	270mm	235mm	970-1050lm	Round
KIS2010	300mm	290mm	660-720lm	Square
KIS2012	400mm	390mm	970-1250lm	Square

### Premium range (Available by special order).

Code	Panel Size	Cut-out Size	Lumens	Form Factor
KIS2014T	500mm	490mm	Call	Square
KIS2016T	600mm	590mm	Call	Square

illume Premium robust custom trade packs offer a harder wearing more robust skylight solution for building and commercial environments, with two additional larger sized models available (500mm & 600mm Squares). These are available by special order.

### illume works where others can't.

illume works in multi-storey dwellings

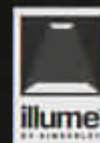

### Why install an advanced skylight?

- ▶ No power required
- ▶ Easy D.I.Y installation
- ▶ Anyone can install
